STH 16/67 OCONOMOWOC BYPASS

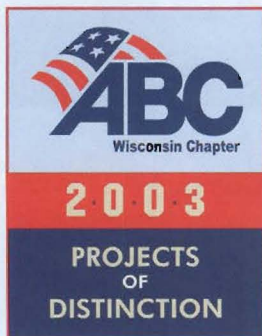

Owner: Wisconsin Department of Transportation
Designer: Ashad Khan, Wisconsin Department of Transportation

Owner's COMMENTS:

"It was a pleasure to work with Wondra on this project and we would be glad to work with them again on future."

The STH 16/67 Oconomowoc Bypass project required working in four locations including Jefferson County, Waukesha County and the towns of Ixonia and Oconomowoc. It also required close communication with the WI-DOT, the counties, townships and the DNR. The townships did not want any traffic on their roadways. Therefore, Wondra Excavating was required to present a haul route and obtain necessary permits from any effected government agency. Since over 450,000 cubic yards of material needed to be

hailed in on out from the various project locations, unique methods of construction and close coordination between all four project areas was required to keep the project on schedule. Cold winter weather and severe frost conditions were overcome to complete the project almost two months ahead of schedule while construction quantities increased by 15%. In-depth planning, teamwork and coordination made this project a success and without question separate it from the rest.
